

AGILESITE OVERVIEW

AgileSite is the custom website and content management system from WTE Solutions, designed for ease of use by non-technical users. Because AgileSite is sold as a Software as a Service (SaaS), there is nothing for you to install and host. It allows small or large companies to save money by performing site content updates themselves with no webmaster or knowledge of HTML. Even novice computers users can add, delete, edit, and publish content, images, links and more. A registered user can safely and securely access their AgileSite website over an internet connection - no special set up or configuration is required. Simply login to your site and make changes.

WHAT IS AGILESITE?

AgileSite is an easy to use Content Management System (CMS) developed by PointShop/WTE Solutions with the source code owned by WTE. It is licensed on a Software as a Service (SaaS) model. Not sure what that is? SaaS applications are sometimes called Web-based software, on-demand software, or hosted software. Whatever the name, SaaS applications run on a provider's servers, which manage access to the application including security, availability, and performance. SaaS customers have no hardware or software to buy, install, maintain, or update resulting in a lower cost of ownership.

AGILESITE FEATURES

AgileSite has many exciting built in tools that make managing your website a breeze including:

- | | | |
|-----------------------------|---------------------------------------|----------------------------------|
| ✓ Media library | ✓ WYSIWYG editor | ✓ Version control |

| ✓ Booking systems | ✓ Newsletter sign-up | ✓ Image gallery |
| ✓ Testimonials | ✓ Online forms | ✓ HTML editor option |
| ✓ Workflow approval process | ✓ Easy deployment and content staging | ✓ Taxonomy (tags and categories) |

AREN'T ALL CONTENT MANAGEMENT SYSTEMS THE SAME?

Many companies offer "content management systems", which are often nothing more than simple page editors or file uploaders. AgileSite allows clients to modify and grow the creative elements, content, and features of their site, and add new features to your site as they are developed. Many Websites are developed via PHP or ASP which provides very little flexibility. AgileSite Lite sites are built on a robust framework and all pages reside inside a Microsoft SQL Server 2008 database, therefore are much easier to operate and manage. While updating your site is easy, our technology is backed with developers, designers, and marketing specialists who can assist you when a project grows or as services are needed.

AGILESITE VERSIONS

- **AgileSite Lite:** A flexible content management system designed especially for small business and personal websites. Choose from a variety of layouts and colorways to create a professional website with powerful functionality for ease of maintenance.
- **AgileSite Professional:** A fully customized content management system and website solution for medium to large businesses. Work with our talented team to create the website your business needs.
